

Where Does Rain Come From?: answers

Year 4 · 13 marks. Accept any sensible answer that is backed up by the text.

1. The water cycle. (1 mark)

Finding information (2b). Finding the key term the whole text is about.

2. Water vapour (an invisible gas). (1 mark)

Finding information (2b). Retrieval from the second section.

3. It cannot be seen. (1 mark)

Word meaning (2a). Working out the meaning of a word from how it is used.

4. 1 = C, 2 = B, 3 = A (3 marks)

Finding information (2b). The three key words in the water cycle, matched to what each one means.

5. The cold air cools the water vapour so it turns back into drops of water, which makes clouds.

(2 marks)

Explaining from the text. A cause-and-effect link that spans two sentences.

6. It is extremely old: the same water has been through the cycle many, many times before (accept: it has been recycled). (2 marks)

Inference (2d). The text never says this directly. The child thinks about what a very long cycle implies.

7. Any two of rain, snow and hail. (1 mark)

Finding information (2b). A quick retrieval from the last section.

8. One mark for water vapour rising and cooling in the cold air; one mark for it turning into tiny drops that gather together to form a cloud. (2 marks)

Summarising (2c). Summarising a process from across two sections.
